

11. Investigation: how do invertebrates move in water?

1. I am going to investigate.

Do invertebrates living in water swim the same as fish?

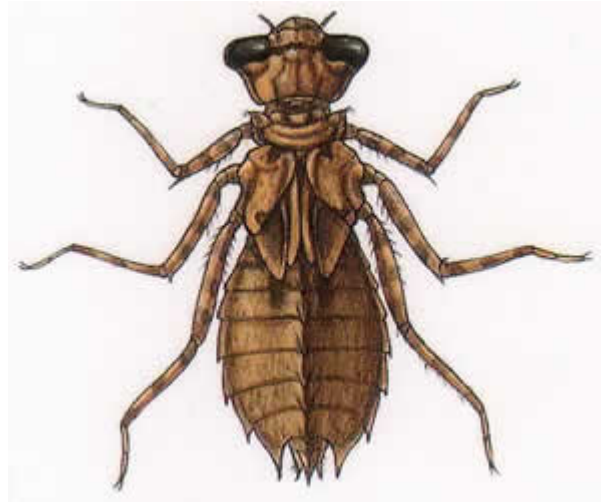

2. What I think will happen.

3. Why I think it will happen.

4. What I am going to do?

- Catch invertebrates in different habitats in the dam, the open water, on the muddy bottom and amongst water plants.

Image: Thailand GreenWorld Program

- Observe them very carefully in a tub of water and see how they move.
- Observe them very carefully under a microscope and look for body parts that help them move.
- For 3 different invertebrates, draw and label a body part that helps it move.

5. What I will need.

- Dip net and bucket to catch invertebrates.
- Microscope to observe invertebrates.

6. How I will make it a fair test?

7. What happened?

8. Was this what I expected?

9. Why did it happen?

10. What was difficult for me?

11. How could I improve this investigation?

12. How can I apply this knowledge?
